Introduction

In order to get the most out of the substrate platform, you will be required to request access to several applications and install tools as part of your local developer tool chain. This page contains a breakdown of the applications you need to request access to and the tools you will need to install, as well as instructions on how to install them quickly. If you need help with access requests or software installation you can reference the

[Substrate Access](#) section of the wiki or reach us on Slack at  [#cloud-ops-support-ext](#)

Application Access

Use [Epic Games IAM](#) (SailPoint IdentityNow) to [request](#) and/or [verify](#) access to the following *Applications*:

Global Protect VPN

GlobalProtect is Epic's Virtual Private Network ([VPN](#)) used for all employees and contractors. It is powered by Palo Alto Networks Global Protect, and you can read more about that on the [GlobalProtect Datasheet](#).

GitHub Enterprise

SailPoint Access Profile: GitHub Enterprise Server user access

GitHub Enterprise is an online software development platform. It's used for storing, tracking, and collaborating on software projects. of analysis and automatic data collection. For more information refer to [About GitHub Enterprise](#).

Artifactory

JFrog Artifactory is a universal DevOps solution for hosting, managing, and distributing binaries and artifacts. To learn more refer to [About Artifactory](#).

Grafana

Grafana is a tool that can be used for creating dashboards to visualize metrics from Chronosphere, creating monitors and alerts, and view logs from Loki. For more information on Grafana refer to the [Grafana Technical Documentation](#)

Local Developer Toolchain

Building for and working with Substrate requires multiple tools installed and configured on your machine.

Unless otherwise noted, you will need to **install the latest versions** of the tools listed.

Use the instructions below based on the operating system you use:

Mosaic macros cannot be exported to this format.
