## Introduction

For services that are using [Application Load Balancer](#) for ingress, the Application Load Balancer will scale automatically based on the number of requests. If you are expecting an increase in number of requests to the Application Load Balancer (for example, a new service launch), it is recommended that you use Provisioned LCUs (Load Balancer Capacity Units). To enable Provisioned LCUs for your Application Load Balancer, create an AWS support ticket and/or consult with our AWS Technical Account Managers (TAM) in the [#vndr-aws-tam-ext](#) slack channel.
