TONUAM Groups

Document Level Classification

[100](#)

Introduction

During your Substrate journey you will be required to request access to use various resources on the Substrate platform. Most access can be gained by requesting a [SailPoint](#) [Job Role](#) be applied to your profile via SailPoint request. However there are still some services that are not

supported by SailPoint that may require a TONUAM role. This document presents frequently asked questions about TONUAM groups.

What is a TONUAM group?

TONUAM or Team Online User Access Management groups are a predecessor of SailPoint groups. They were used as groups to represent projects in Substrate. Membership in a TONUAM group grants access to resources.

How do you find out if you are a member or owner of one?

You can find out if you are a member or owner by using IAMbot.

1. Open Slack
2. Click on your own name under **Direct messages.**
3. Type `/okta-groups` `@Your_Name`
4. Press **Enter**
5. You will be presented with a list of all of your Okta groups. If you have a TONUAM group, it would be prefixed with **TONUAM-**.

Detailed information can be found in the [IAMBot](#) documentation.

If you are a member of a TONUAM group, what permissions/access does it have?

Currently there is no tool that would allow the user to know which permissions/access a TONUAM group gives you. You would need to contact the owner of the TONUAM group. To find the owner contact IT via the #it-helpdesk-ext slack channel.
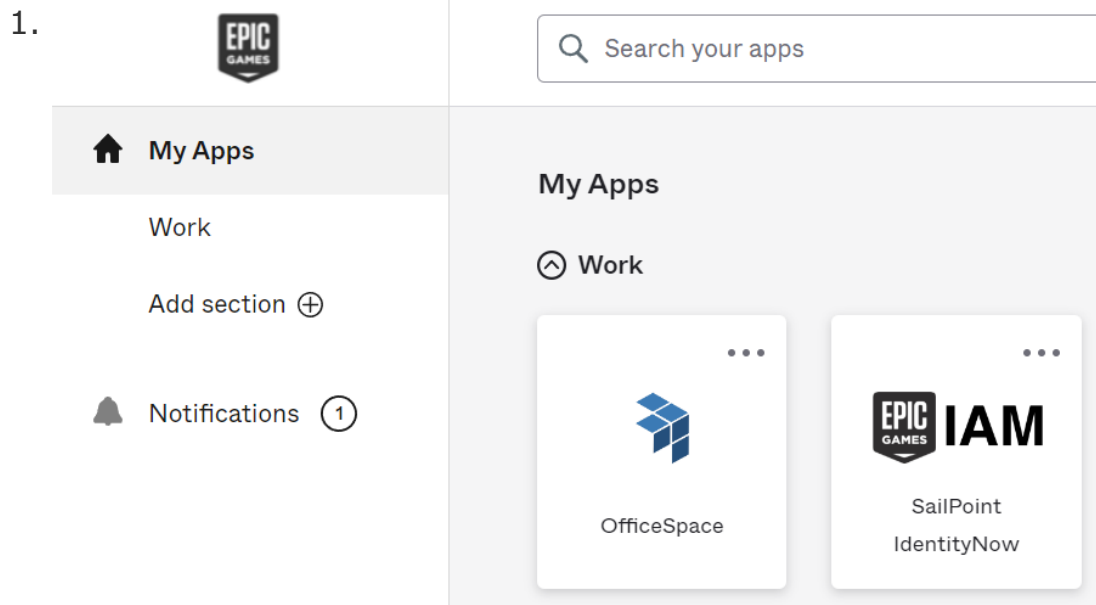

How do I get a new TONUAM group created if I don't have one ?

New TONUAM roles are no longer created, but they are still available to be assigned.

TONUAM groups that still exist are available via Sailpoint Access Request. They can be requested by:

1. Go to your Okta Dashboard.
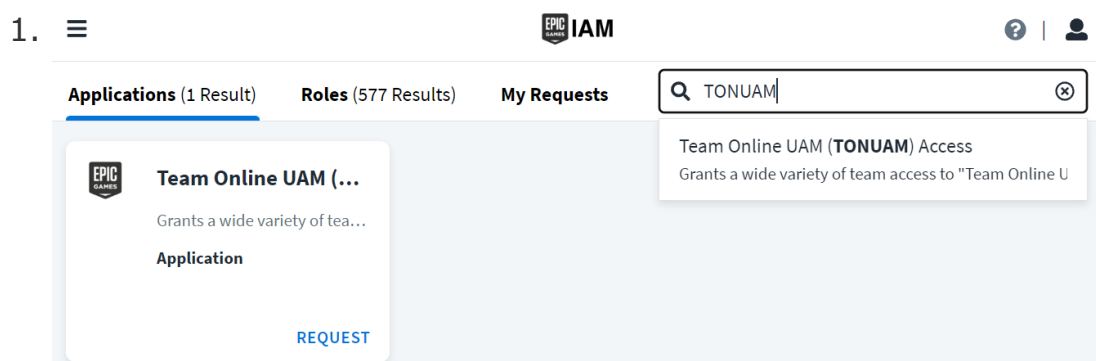

2. Click on the **IAM SailPoint IdentityNow** tile.

1.

3. Click the **Request Center** link at the top of the screen.
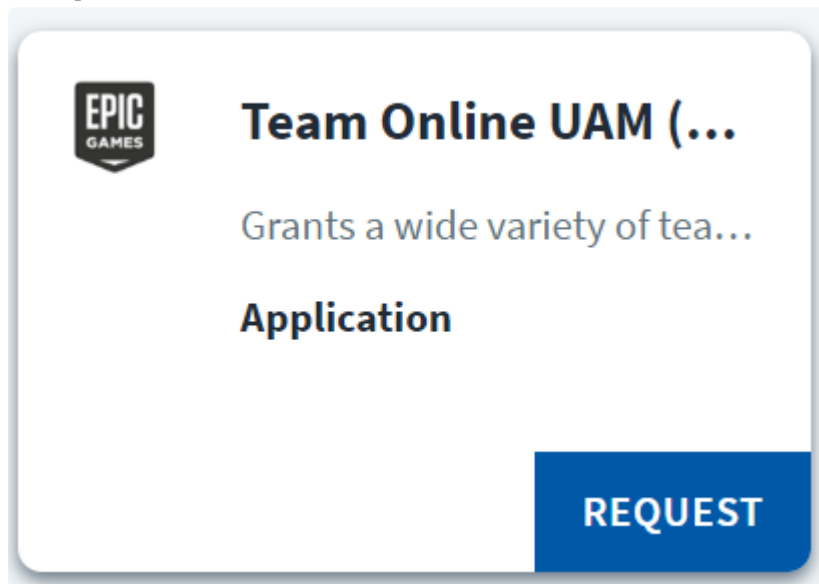

1.

4. Click **Applications**. (Default Selection)
5. In the **Search** field search for "TONUAM.

1.

6. Click **Request** on the **Team Online UAM** tile.
    1.

Set Expiration Date

Optional. Select a date when this access should be automatically removed.

📅

9. Click **Submit**.

After a request is submitted you will receive both and email and Slack notification. When the request has been approved you will receive a notification as well.

What is the Difference between TONUAM and SailPoint roles?

TONUAM is similar to SailPoint groups in that the creation of a TONUAM group and subsequent assignment of the group to a user would give the user access to specific services. They still exist due to the fact that some services are not supported by Sailpoint.

What are some services that still require a TONUAM group?

Currently these services require that you have a TONUAM group applied to your profile in SailPoint.
