Introduction

November 13, 2024:

Epic has completed the build-out of [Loki](#) as a replacement to SumoLogic.

See the [Loki User Guide](#) for more information

SumoLogic continues to be a supported logging platform and service will continue until the end of February 2025, however please begin using Loki for day-to-day queries and only fall back to SumoLogic if you are unable to achieve previously used SumoLogic functionality in Loki. Please notify [#ct-obs-support-ext](#) if you run into such issues.

- **ALB logs are no longer ingested into SumoLogic and can be queried using the Loki ALB data source in [Grafana](#) (and [EOS Grafana](#))**

- **We are dual writing Kubernetes and Oldprod logs to SumoLogic and Loki, and Loki data sources have been provisioned in Grafana**

- **If you are currently sending logs to SumoLogic via a nonstandard ingestion path (i.e. Not Substrate or Oldprod), please reach out to [#ct-obs-support-ext](#) with your use case so that we can advise alternatives**
